PF881EU Short Instruction Video

Air circulation system

The convection board is the white board included with the unit. It is placed at the bottom of the chamber, where it helps circulate heat evenly throughout the interior.

With the convection board, the temperature inside the proofer is kept evenly distributed. This ensures a more stable temperature and consistent results.

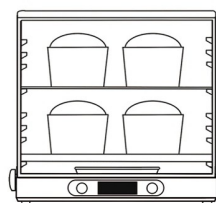

It can also be used as a shelf to support trays.

*PF881EU is not equipped with temperature reduction or humidity adjustment functions.

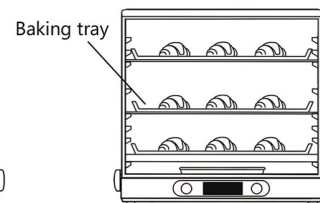

Flexible shelf configuration

The proofer comes with two shelf plates, allowing you to customize the layout to suit your needs.

Recommended baking tray size: 410 x 320 mm

4 loaf pans

3 baking trays
